# Seeds . . .

Seeds are not—like nuts and bolts—inanimate—but are living objects in a dormant state. It is not wise to buy CHEAP SEEDS and jeopardize your chances of success. Earn the best dividend on your outlay by purchasing PEDIGREED strains. As in Animals, so in Plants—BREED TELLS. You can buy Cheaper seeds than Burnett's but not Better. The choice is yours—CHEAPEST OR BEST.

Make plans now for a bigger and better vegetable garden for the year 1941. We all remember our experience in the last War when the great problem at home was the supply of fresh vegetables. Will this condition again prevail? Rumors are heard at this time of a war garden campaign by our government. War gardens may be necessary in the current emergency even if we do not take an active part in the War.

## BURNETT'S *Lawn Grass Seed* MIXTURES

### *The Satisfaction of a Perfect Lawn*

A fine lawn is obtained by the careful and exact fulfillment of three fundamental requirements. Preparation of the seed bed, the use of good grass seed and the proper maintenance of the turf once established. These three factors are of equal importance, and failure to meet the requirements of any of these will make the efforts expended on the other two of little avail. **Burnett Bros. Inc.**, with a reputation of supplying grass seeds of the highest quality for a period of over thirty years, assume the responsibility of furnishing good seed.

#### HORMONE-TREATED LAWN GRASS SEED

Plants from Hormone-Treated Grass Seed have nearly three times the root strength of plants from untreated seed

Outstanding among the scientific discoveries of recent years. Extensive experiments have shown that the Hormone Treatment of Grass Seeds will result in quicker germination and a marked increase in root growth.

The production of this strong, extra vigorous root system (see illustration above) is of vital importance in making a new lawn or renovating an old lawn. The extra stimulant derived from Hormone Treatment is of particular value for late seedings, or where it is necessary to produce an established turf in a relatively short time.

HORMONE-TREATED available in all mixtures at 5c. per lb. additional to listed prices

### BURNETT'S "Killarney" MIXTURE

Burnett's Lawn Grass Seed Mixture "Killarney" is composed of a combination of the finest imported and domestic grasses, the highest grades possible to procure, and specially adapted for this climate. This mixture is composed of all solid, re-cleaned seeds of the highest germination. Therefore, both owners of large estates and small homes requiring a permanent sod and everlasting lawn should by all means use this high-grade mixture. If the ground is properly prepared, we are certain "Killarney Mixture" will produce a turf of velvet.

The above mixture is made from our own formula, and composed of grasses specially adapted for the purposes of producing turf which retains its rich green color and velvety appearance throughout the entire summer and fall. In making up this high grade mixture we are careful to use only the very finest quality of all the most desirable, dwarf evergreen, **re-cleaned** grasses, free from chaff and weeds, which thrive well on any soil, thus ensuring a beautiful and permanent lawn.

## SOIL-SOAKER HOSE

The new "seepage irrigation" method that soaks the soil thoroughly like an "all night rain." Puts the water where you want it and where it should be—on the ground—not up in the air to be wasted and carried away by high winds. Excellent for use in gardens and lawns, and around shrubs, trees, hedges, borders, etc. Porous canvas is treated to resist mildew. Screws to faucet or water hose, replacing sprinkler, and is closed at far end. 12 ft. \$1.25, 18 ft. \$1.75, 30 ft. \$2.75, 50 ft. \$4.75.

## PROTECTION SIGNS

For Lawns, Shrubs and Borders

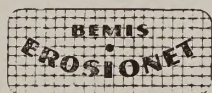

These attractive and durable metal signs have raised letters and border.

Baked enamel finish for long service. Green letters on white background. Worded as follows: Keep Off—Please—Seeded—or Keep Off the Grass. Complete with stake. 40c. each.

## BURNETT'S "SHADY PLACE" MIXTURE

When a lawn is much shaded, either in whole or in part, the shaded portions should be sown with Burnett's "Shady Place" Lawn Grass Mixture, which is a combination of fine, dwarf-growing evergreen varieties, which, in their wild or natural state, are to be found growing in the woods or other sheltered or shady places. Under or in the immediate neighborhood of large trees fertilizers should be applied liberally and frequently, for the trees absorb the fertilizer and impoverish the ground. Ground much shaded is very frequently sour, and if the drainage is defective it is apt to be covered with moss. In such cases lime raked in will sweeten the soil, but the moss should be first removed. Lb. 80c., 5 lbs. \$3.75, 12½ lbs. \$8.50, 25 lbs. \$16.00, 100 lbs. \$60.00.

## PERMANENT TURF

Will produce the most permanent lawn possible. In sun or shade—good or poor soil. Prepared especially for Chinch Bug infested areas

Many beautiful lawns throughout certain areas of the eastern coast of the United States and elsewhere have been completely destroyed as a result of the extensive ravages of a recent lawn pest, the Chinch Bug. This bug is of the sucking insect type and does its damage to lawns by piercing the grass blades and shoots near the soil level and sucking out the juices of the grass.

Certain grasses have been found to be highly resistant to the attacks of this insect and it is a careful blending of these grasses that make up our "Permanent Turf."

**Permanent Turf (no Clover).** 12½ lbs. \$12.00, 25 lbs. \$22.00, 100 lbs. \$78.00, 500 lbs. \$350.00.

# NOVELTIES AND SPECIALTIES IN FLOWER SEEDS

THOSE MARKED

ALL AMERICA SELECTIONS

1941

All gardening enthusiasts are more or less interested in something new in the floral world, and for this reason we keep in touch with all new introductions as they appear from year to year. These novelties and specialties have been selected by us as having a good claim to merit and are well worthy of a trial.

Each year a group of horticultural experts makes a careful study of new floral novelties produced by plant breeders. # Wilt-Resistant Types Restoring Popularity of Asters

## BURNETT'S BEAUTIFUL ASTERS

The introduction of a Wilt-resistant strain of Asters of recent years has helped tremendously in restoring this beautiful flower to popular favor as a garden plant. Up until the time of the origination of this resistant strain, garden enthusiasts were becoming discouraged trying to grow Asters outdoors with the wilt-disease so prevalent. The appearance of this new strain has again awakened interest in the culture of Asters.

For best results the ground cannot be too richly prepared. Plants from seed sown in the open ground in May will bloom in September and October. For July and August flowers, sow in March or April in cold frames or hotbeds. We especially recommend the following as being the best for cutting and general garden use.

# For Best Results Plant Peas in Early Spring

## PEAS

One quart will plant  
about 100 feet of drill

Peas do best in a light, rich soil; for private use sow in double rows 6 to 8 inches apart, the rows 2 to 4 feet apart, the tall ones requiring brush. Commence sowing the extra early varieties as soon as the ground can be worked in March; continue for a succession every two weeks until June. A good crop can be secured by sowing the extra early sorts in August for Fall use. # Lilies Lend an Air of Distinction to Your Garden

## HARDY GARDEN LILIES

The various types of Hardy Lilies are unequalled by any other plant in their unique combination of beauty, gracefulness, and stately magnificence; yet they are entirely unknown in many gardens. Their culture has been entirely too much neglected, but each year as their merits become better known, they increase in popularity. Contrary to general opinion, most Lilies are robust, and when once planted should not be disturbed. In cold climates the bulbs should be protected from freezing during the Winter by a heavy covering of leaves, hay, or straw.

"It would seem that there is no question as to the permanence of lead pencil markings on these labels, and their attractive form and color have been admired by many visitors."

GEORGE H. HOLLISTER,  
Superintendent of Parks, City of Hartford, Conn.

... their color, shape, size, ease of preparation and permanent legibility make your Perfect Garden Labels the most satisfactory I've yet seen or used."

A. H. HERRICK, F.R.H.S.,  
The Digest Gardener, Cambridge, Mass.

...at last!

Mark with  
ordinary  
lead pencil.

Permanent  
all soils...  
all seasons.

With an ordinary lead pencil write or print on the ample horizontal marking space of a **PERFECT GARDEN LABEL**. Set it in the ground near the plant you wish to mark. Put it in deep, so that only the marking space shows.

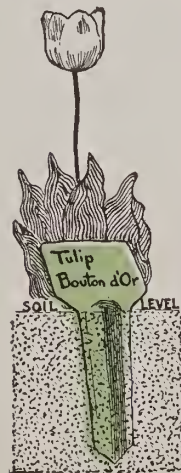

One year, two years, three years, four years afterward,—at any time—you will be able to read easily every character of your marking. In damp soil or dry, acid or alkaline, sun or shade, all weathers, all seasons your markings will be completely legible.

Previous markings can be readily erased at any time with a stiff pencil eraser and the label can be used again.

The marking space is large enough for three or four lines of writing or even display printing. In experimental gardens, notes may be added at any time. The under side of the marking space can be used for extensive notes, or you can write on the shaft.

These labels are designed so that the shaft may be entirely buried, with the marking space just above the surface on an angle for convenient reading. Thus they do not interfere with weeding and cultivating.

If stepped on they do not break, but merely bend down and spring back when released.

The **PERFECT GARDEN LABEL** is inconspicuous. The beautiful cool gray green color blends with the soil, foliage and rocks. Only the marking space shows. If you wish the labels hidden they may be almost buried out of sight and lifted only for reading. The markings will be completely legible. A touch of the finger will clear away the soil from the smooth, clean, Duco-like surface. The only caution is not to rub too hard if the soil is quite wet.

These labels are safe for fall planting. Frost does not easily heave them out of the ground on account of the corrugated shaft. If your borders flood in the spring they will not float away from the plants marked as they are heavier than water.

### USE THE PERFECT GARDEN LABEL IN YOUR GARDEN

Your plants will be safely and permanently identified.

You will preserve the elusive names of your named varieties.

Your valuable specimens will be insured against careless weeding and cultivating.

You will enjoy their convenience and simple method of marking.

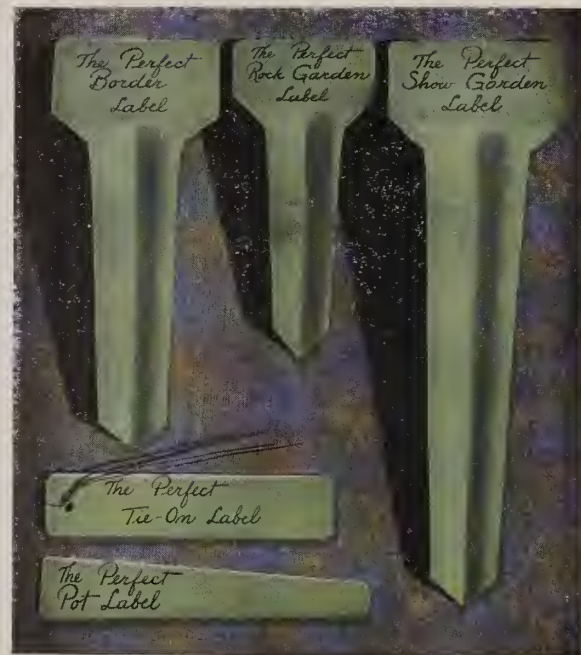

They will not mar the beauty of your borders and rock gardens.

They can be erased and marked again.

They are economical because they are permanent.

## A PERFECT GARDEN LABEL FOR EVERY PURPOSE

## THE NEW HANDY PLANT-TIE

**QUICK . . .** "Twist-ems" save the tedious work of tying plants with twine or raffia and cutting each piece with a knife or shears. Simply put around the stem, twist and it is tied.

**PERMANENT . . .** "Twist-ems" do not break or come loose. The wire running through the center of tape makes them unbreakable and they cannot come unfastened. Tape protects stem against injury.

**ATTRACTIVE . . .** "Twist-ems" are deep green in color—exactly the same shade as the foliage of plants. They, therefore, blend in with the plantings and do not detract from the appearance of the garden.

**CONVENIENT . . .** "Twist-ems" make it unnecessary to carry with you shears, raffia, or twine, and tie and cut. A few "Twist-ems" in one's pocket are all that is needed.
